Support Structures to Help All Students Succeed
Preparing for Mineral Identification

Instructional Plan

Teacher | School | Subject/Course | Grade | Class Length
--- | --- | --- | --- | ---
Keith Olive | Wilson Middle School | Earth Science | 8th | 88 minutes

**Topic/Lesson Title**
Introduction to Mineral Identification

**DESIRED RESULTS**

**Next Generation Science Standards**

*Performance Expectations*
- 5-PS1-3. Make observations and measurements to identify materials based on their properties.
- MS-PS1-1. Develop models to describe the atomic composition of simple molecules and extended structures.

*Crosscutting Concepts*
- Patterns
  - Macroscopic patterns are related to the nature of microscopic and atomic-level structure.

*Science and Engineering Practices*
- Planning and Carrying Out Investigations
  - Conduct an investigation to produce data to serve as the basis for evidence that can meet the goals of an investigation.
- Analyzing and Interpreting Data
  - Analyze and interpret data to determine similarities and differences in findings.

**Learning Targets/Lesson Objectives**
- I can understand mineral identification techniques and be able to identify mineral samples.
- I can collect data and use the data with identification keys to successfully identify mineral samples.
BACKGROUND INFORMATION

Resources Used To Develop Lesson
- Stories in Stone GEMS (Great Explorations in mathematics and Science) Kit®
- Mineral samples
- Mineral identification keys
- Streak plates
- Hardness test kits
- Notes

Interdisciplinary Connections

Assessment Of Prior Learning
- Oral discussions about mineral uses, gems, crystals, and rock collecting.

Materials/Equipment/Tools
- Streak plates
- Hardness test kits
- Mineral identification keys
- Mineral data tables
- Mineral samples

FORMATIVE AND SUMMATIVE ASSESSMENT

Formative Assessment
- Students share strategies for drawing and estimating the size of angles.
- Students show how to find the percent of a number.

Summative Assessment
- Demonstrate techniques, make adjustments to and suggestions on techniques, and find out how successful their group was in correctly identifying their samples.
- Group performance assessment and a written assessment on minerals.
- The final activities will involve a series of events:
  - Student and parent evening where the girls and their mothers will come in and create their own makeup from mineral powders.
  - Everyone will use minerals to make their own toothpaste from mineral powders.
  - The owner of a local jewelry store will come share information about gem minerals and have gemstone jewelry from the store for students to examine.
LESSON PLAN

Lesson Overview

1. Students review notes from prior day’s lesson.
2. Overview of new lab.
3. Monitor progress in each group and ask clarifying questions.
4. Share findings with class.
5. Clean up.

<table>

</thead>
<tbody>
<tr>
<td>1. Introduce new lab.</td>
<td>1. Review notes from prior day’s lesson.</td>
</tr>
<tr>
<td>2. Review vocabulary.</td>
<td>2. Work in cooperative groups of three to learn the techniques of mineral identification.</td>
</tr>
<tr>
<td>3. Demonstrate proper techniques and improper techniques.</td>
<td>3. Keep own data, demonstrate the proper technique on mineral samples.</td>
</tr>
<tr>
<td>4. Demonstrate data recording on data tables.</td>
<td>4. Share findings with group members.</td>
</tr>
<tr>
<td>5. Establish groups.</td>
<td>5. Clean up of streak plate and hardness test kit.</td>
</tr>
<tr>
<td>6. Review group expectations.</td>
<td></td>
</tr>
<tr>
<td>7. Wander around the room to monitor and adjust procedures and group dynamics.</td>
<td></td>
</tr>
<tr>
<td>8. Topics to review:</td>

</table>

LESSON REFLECTIONS

After the lesson, I reflect that I would have liked to spend a little more time pulling vocabulary meanings out of the kids and get them to state it more in their terms. Having more time to get the kids to demonstrate the techniques of testing and using their data with the identification key is another area I’d like to time manage into the lesson. We got to do this the next day, but I would like them to all go home saying, “Hey, I can do this.” Overall, the lesson flows pretty smooth and clean as long as the teacher monitors the understanding of the students and continues to check in with them to make sure they “get it.”
